

## Visit to St. John's Island National Marine Lab & Marine Aquaculture Centre || 16 June 2017

06 June 2017 || TO NUS Staff

Did you know that St. John's Island is home to a marine laboratory run by NUS, as well as a facility that studies fish farming technology set up by the Agri-Food & Veterinary Authority of Singapore? Here's your chance to visit them!

### Visit to St. John's Island National Marine Laboratory and Marine Aquaculture Centre

*Brought to you by the Office of Environmental Sustainability*

The St. John's Island National Marine Laboratory hosts visits to create better awareness of environmental issues and marine science research in Singapore. Participants will also attend a short seminar during this visit.

The Marine Aquaculture Centre was set up to develop technology for marine food fish production and facilitate development of commercial aquaculture and related activities in Singapore and the region.
